Well No. 1 is located 660 ft. from N line and 660 ft. from E line of sec. 18

NE 1/4 Sec. 18 22S 36E NMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

South Eunice Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3588 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The Cities Service Oil Company, Closson "A" No. 1, was completed in October, 1937 at a total depth of 3814' in the Seven Rivers formation with 7" OD casing set and cemented 3717'.

This well has been temporarily abandoned for several years as a water well but never was plugged as there are reserve gas possibilities in the upper part of the Seven Rivers formation behind the 7" casing.

It is proposed that we repair this well and try to recomplete it as a gas well as there is a current market for gas from the South Eunice Field. Our intentions are to pull tubing from the well, log with a radio active log, set a retainer in the bottom of the 7" casing and squeeze the water bearing formation and open hole off with cement then perforate the zones indicated on the log as gas zones and recomplete the well as a gas well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
