### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Glosson #8 No. 1 was completed June 13, 1940, as a producing oil well at 3840'. Production decreased to a point where the well was non-commercial. In 1955, an attempt was made to plug back and recomplete as a gas well. This workover was unsuccessful and the well was S.I.

It is proposed to plug and abandon the well by reclaiming all possible 5 1/2" casing, loading hole with mud, spotting 15 sacks cement to cover perforations, spotting 25 sacks cement where 5 1/2" casing is shot off, spotting 10 sacks at the base of the 8-5/8" casing at 1632' and 10 sacks in the top of the 8-5/8" casing, leaving a 1/4" pipe 4' above the surface as a marker.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
