The elevation of the derrick floor above sea level is **3574** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to 3610' in line and sand. Ran 114 3/4 joints (3531.7') 5 1/2" OD 14# 8R J-55 SS casing and set at 3540' and cemented with 400 sacks of cement containing 4% gel and 300 sacks of neat cement on bottom. Plug was down at 2:50 A.M., February 25, 1956. Cement was allowed to set 48 hours before testing for shut-off. Prior to drilling plug, 1000 pounds pressure was applied with all valves closed during a 30 minute interval with no drop in pressure. After drilling plug, 500 pounds pressure was applied with all valves closed with no drop in pressure during a 30 minute interval.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
