Oil Conservation Commission
State of New Mexico
Santa Fe, New Mexico

Gentlemen:

RE: Application for Non-Standard
Location, Lamar Lmt B-1
330' from South and East Lines
Section 20, T-22-S, R-36-E

for mail
We request the Commission grant us a Non-Standard location for a gas well in order that we might abandon our Lamar Lmt No. 1, 660' from south and east lines of Section 20, and transfer the gas allowable for the Southeast Quarter of Section 20 to our plugged back Lamar Lmt B-1 330' from South and East line of Section 20.

The facts concerning the request are as follows:

1. We commenced our Lamar Lmt No. 1, June 2nd, 1950, and completed September 11, 1950. The drilling contractor had a bad fishing job at 3618' and cemented hole back through the Yates formation twice in sidetracking efforts. The hole was drilled to 3800' and plugged back in an attempt to produce gas from the Yates formation. Due to the long period of time that mud, water and cement were on the formation, we have never been able to get the well to produce as it should. It has always been a marginal well.

2. On March 5, 1957, we commenced our Lamar Lmt B-1, 330' from south and east lines of Section 20, and completed the well on March 18th, 1957, at a total depth of 3827' as a Queen Oil well. This oil zone has been depleted and we plugged the well back on February 20, 1959, to a depth of 3400' and perforated the Yates Gas sand. The well has a shut-in pressure of 701#S and the volume tested 1,353 MCF @ 300#S.

3. By copy of this letter by registered mail, we have requested waivers from Sunray-Mid-Continent, Gulf, Cities Service, and Continental, the offset operators.

Yours very truly,

DALPORT OIL CORPORATION
