DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The Meyer B-22 No. 1 was completed 5-2-49 at TD 3450' open hole, for a calculated open flow potential of 11,000 MCFGPD from the Yates 3088-3450' open hole. A recent test showed this well to have 121 MCFGPD deliverability at 80% SIF.

It is proposed to clean out this well to TD and frac the pay zone w/20,000 gals standard treatment. Anticipated results will enable the well to produce a full 320-acre allowable and make up accrued under-production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
