The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

It is our intention to drill a well with rotary tools at the above location to a depth of approximately 3410' unless commercial oil production is encountered at a lesser depth. All casing points will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

The following casing pattern will be used: 8 5/8" casing will be set at approximately 1500' and cemented with 400 sacks cement. 5 1/2" casing will be set at approximately 3410' and cemented with 730 sacks cement.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
