Britt B-10 _____ March 19, 1963

Well No. 4 is located 660 ft. from S line and 1980 ft. from W line of sec. 10
SE/4 SW/4 Sec. 10 20-S 37-E NMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
NMPU La New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to drill a well with rotary tools at the above location to an approximate total depth of 7850'. Plans call for testing the Pennsylvanian formation (Case pay) and dual completing in the Weir Blinberry and Monument Tubb formations. Casing will be set in accordance with USGS regulations and other special requirements will be complied with.

The following casing pattern is planned: 9 5/8" OD 36# H-40 casing set at 1300' w/500 sacks cement, cement to circulate; 7" OD 20# and 23# J-55 and N-80 casing set at 6600' with 500 sacks cement, cement to return to 2300'. If production is obtained in the Pennsylvanian, a 4 1/2" OD 9.5# J-55 liner will be installed from 6550-7850' with 150 sacks cement, cement to return to the 7" casing.

Permission to produce this well upon completion is also requested.
I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
