NOTICE OF INTENTION TO ABANDON WELL	

(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Well No. **1** is located **100** ft. from **[N]** line and **100** ft. from **[E]** line of sec. **8**
NE 1/4 (Twp.) **100** (Range) **N. 40.00** (Meridian)
ELLISSE ACO (Field) **100** (County or Subdivision) **New Mexico** (State or Territory)

The elevation of the derrick floor above sea level is **5700** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this test to 7500', drilling 13-3/4" hole and cementing 10-7/8" casing to 1000' with sufficient cement to circulate. 9-7/8" hole will be drilled with air into the San Andres at approximately 1300' and 7-7/8" hole from that point to sufficient depth to test the Aco formation at approximately 7500'. A 2 1/2" CP oil string will be cemented through the Aco. The large hole is being 3 1/2" to be drilled down to the San Andres with the possibility that 7-7/8" might be set through the San Andres should it be decided the production possibilities from the San Andres warrants this procedure. All cement jobs will be tested according to regulations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
