Re: Application for Single Tubingless  
Completion, M. B. Weir "B" Well No. 8,  
Skaggs-Glorieta Pool, Lea County,  
New Mexico.

Attention: Mr. A. L. Porter, Jr.

Gentlemen:

TEXACO Inc. respectfully requests administrative approval of an exception to New Mexico Oil Conservation Commission Rule 107 (e) for its M. B. Weir "B" Well No. 8. This well is a proposed Single Tubingless Completion in the Skaggs-Glorieta Pool, and is located 660 feet from the South line and 1650 feet from the West line of Section 12, T-20-S, R-37-E, Lea County, New Mexico.

The production casing string will consist of 2-7/8 inch O.D. tubing set at approximately 6880 feet in a 6-3/4 inch hole. Completion will be through perforations from approximately 5280 to 5300 feet in the Glorieta formation. It is anticipated this zone will be slightly corrosive, therefore the entire casing string will be internally plastic coated for corrosion control. Also artificial lift will be required upon completion.

This zone has been approved by the New Mexico Oil Conservation Commission as a tubingless completion in multiple completions in this area. An instance is Order No. MC-1217, TEXACO Inc., C. H. Weir "A" Well No. 9.

1. The first group of authors (e.g., [1, 2]) has shown that the use of a single, common, non-physical, reference frame for all the particles in the system is not only unphysical, but also leads to a violation of the principle of relativity. This is because the laws of physics are not the same in all reference frames. The laws of physics are only the same in all reference frames that are related to each other by a Lorentz transformation. This is the principle of relativity. The use of a single, common, non-physical, reference frame for all the particles in the system is not only unphysical, but also leads to a violation of the principle of relativity. This is because the laws of physics are not the same in all reference frames. The laws of physics are only the same in all reference frames that are related to each other by a Lorentz transformation. This is the principle of relativity.

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem. Once the problem has been defined, the next step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the underlying causes. Once the causes have been identified, the next step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed to implement the plan. Finally, the last step is to implement the plan and monitor the results. This involves putting the plan into action and tracking the progress of the solution. Once the problem has been solved, the final step is to evaluate the results and determine if the solution was effective. This involves comparing the results of the solution to the original problem and determining if the problem has been solved. If the problem has not been solved, the process must be repeated.

Attached is a diagrammatic sketch of the proposed tubingless completion and a plat showing the location of all wells on the M. B. Weir "B" Lease and all offset wells along with the name and addresses of all offset operations. A copy of this request is being sent this date to all offset operators by registered mail.

Your early consideration of this request would be greatly appreciated.

Yours very truly,

J. G. Blevins, Jr.  
Assistant District Superintendent
