13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

It is proposed to perforate the Blinbry formation from approximately 6028' to 6357' and acidize with 8000 gallons 15% NeFe HCl.

This well currently produces from the Drinkard and Abo formations at 6722' to 7417'. Following a selective test of the Blinbry, it is anticipated all zones will be downhole commingled if subsequent approval of such is received.

Estimated starting date: July 1, 1993.
