Gentlemen:

We are enclosing in duplicate Form C-122, "Multipoint and One Point Back Pressure Test for Gas Well", for the Union Oil Company of California operated Northern Natural State Well No. 1. The subject well, located in Section 28, Township 22 South, Range 35 East, Lea County, New Mexico, is perforated in the Middle Morrow stratigraphic section of the Northeastern edge of the Delaware Basin.

Calculated absolute open flow potential was taken from a one-point test, and as soon as a pipeline connection is obtained, a four-point test will be taken and submitted.

The static column wellhead pressure was calculated by the use of Garrett Computing Systems' "Absolute Open Flow" program, which we understand is acceptable in lieu of Form C-122 supplemental worksheets.

Should there be any questions pertaining to this matter, please do not hesitate to contact this office.

Yours very truly,

A handwritten signature in dark ink, appearing to read "L. F. Thompson", written over a horizontal line.

L. F. Thompson
