RE: Owen A #8, Drinkard Completion  
Unit I, Section 35-T21S-R37E  
Lea County, New Mexico

Dear Mr. Sexton:

The Cities Service Owen A #8 was recompleted as a dual producer in the West Nadine Drinkard and Wantz Abo on January 18, 1986, after producing from the Wantz Granite Wash and Wantz Abo since 1977. On the initial potential test, 8 BO and 3 BW were pumped from the Drinkard zone.

During the completion and continuing afterward, fluids were produced as an emulsion. With the marginal producing rate, it soon proved uneconomical to treat the fluids. Consequently, the Owen A #8 Drinkard completion was shut-in before a 20-30 day GOR test could be run. This zone will remain shut-in until treatment becomes economically feasible.

Sincerely,

Rebecca A. Egg  
Petroleum Engineer  
Southwest Region
