

### TERRAIN

Local terrain consists of an undulating plain with aeolian sand deposits interspersed with deflation basins.

### FLORISTICS

The local plant community consists of Prosopis juliflora, Quercus havardii, Artemisia filifolia, Senecio longilobus, Gutierrezia sarothrae, and Aristida longiseta.

### CULTURAL RESOURCES

No cultural resources were recorded during this reconnaissance.

### RECOMMENDATIONS

ACA recommends clearance for the proposed drill location and access right-of-way and suggests that construction proceed without modification of existing plans.
