

of the unorthodox location and the simultaneous dedication of this well to the non-standard proration unit established by R-4139.

You are requested to grant the Cities Federal No. 3 an 80 acre Jalmat Gas well allowable, pending the hearing before the Oil Conservation Division and receipt of the order. There are numerous OCD approved precedents from applications which were simular to this situation, so we feel that our application will be approved. Further, experience has shown that water can damage the productive capacity of a shut in Jalmat gas well.

Considering these facts, we feel that our request for an 80 acre Jalmat gas well allowable will be justified.

Yours truly,
