Subject: OG6.2 CHANGES IN U.A.T.

Date: 1994-07-26 12:58

Priority:

Message ID: B78762FA

Conversation ID: B78762FA

The following 6.2 changes have been moved into the test region:

ACRE - We should now have the ability to have shared partial dedicated acreage for two wells. This is so we can create two spacing units, one for an oil well and one for a gas well in an associated pool. Also the error message on this screen has changed so that now when we try to dedicate acreage to a well and there is an overlapping dedication already in existence, the system will tell us what other well is causing problems in the dedication. To test this: 1. Set up an associated pool using the new POOL screen. Answer yes to the question regarding simultaneous dedication. 2. Set up a gas well in C101 and C102. Dedicate 320 acres to it using ACRE. 3. Set up an oil well and dedicate 40 of those 320 acres. Answer yes to the simultaneous dedication question. Confirm. To test the second part, go to the oil well you just set up and undedicate the acreage. Then try to rededicate the acreage after answering NO to the simultaneous dedication question. You should get an error message showing the overlap with the gas well including the API and pool of the gas well.

SLWC - New screen that allows us to list all well completions for an OGRID/Property/Well # combination. This change is to accommodate the units which now have duplicate well numbers within a property ID. Test this using the following combination: OGRID 50350, Prop 6 and well # 1. You can then go to any of the well completions shown by placing an S by that W/C and depressing PF10. *May advance to any screen*

OPCH - Version 2. Screen has changed dramatically. Please test this very thoroughly. *what to plug*

Refer to detail design for specific questions regarding operation.

POOL - Changed so that we may now denote ability to share dedicated acreage with different spacing units. Related to ACRE change above. *one field add*

C101 - System now permits same API to be used after cancellation.

C102 - Changed so that now no well completions are allowed if the application to drill has been cancelled.

CLOG - Changed so that no casing records are allowed on a cancelled application. *p m*

Tests should be conducted in ICT4 using logon/password OGUAOCD/OGUAOCD and transaction ID OGQA.

Please complete this User Acceptance Testing by Thursday, July 28, 1994 and let me have your comments by Friday 7/29 at noon. If you run into any program bugs, please let me know about those as soon as you encounter them by phone or fax.

If you have any questions, please call me. Thanks for the help.
