Attn: Mr. Jerry Sexton

Dear Mr. Sexton:

BTA Oil Producers would like to apply for an exception to Rule 402-Shut-In Pressure Test on the above referenced well.

The well is currently producing 1286 MCFD, 11 BOPD and 2 BWPD with 300 psi. This well is extremely hard to recover after any shut-in period. It usually takes about a week of unloading the well before it returns to normal production. This well is in the later stage of pressure depletion and does not build up much pressure.

If you have any questions or need any further information, please contact me.

Yours Very Truly,

Thomas J. Williams  
for BTA Oil Producers
