Mr. Jerry Sexton
NMOCD
P. O. Box 1980
Hobbs, New Mexico 88240

Dear Mr. Sexton:

Cross Timbers Production Company has recently performed a remedial workover on the McCallister No. 4 well in the West Nadine Blinebry Pool in Lea County. As a result of extended flow testing of a lower Blinebry interval, the well has overproduced casinghead gas. This lower Blinebry interval has been isolated with a retrievable bridge plug and production from this interval has been suspended.

Cross Timbers Production Company has appeared before the NMOCD at a hearing held January 24, 1991, to request that the limiting GOR in the West Nadine Blinebry Pool be increased and the overproduction from the McCallister No. 4 well be cancelled. A ruling has not yet been made concerning this application. Cross Timbers Production Company plans to suspend production from the lower Blinebry until a ruling has been made.

Additional Blinebry intervals have recently been completed and are currently being production tested. The current casinghead gas production is approximately 150 MCFPD, well below the casinghead gas allowable of 568 MCFPD.

Cross Timbers Production Company respectfully requests that we be allowed to continue to produce the McCallister No. 4 well at the lower casinghead gas rate until the overproduction has been made up.

Your attention to this matter will be greatly appreciated.

Sincerely,

CROSS TIMBERS PRODUCTION COMPANY

Gary L. Markestad
Operations Engineer
