(Note: Report results of multiple completion on Well Completion or Recompletion Report and Log form.)

13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Currently producing from San Andres perforations 4299'-4309'. Propose perforating and completing Seven Rivers zone 3138'-3168' on or about 10/28/96. Upon completion of Seven Rivers zone it would be commingled and produce along with the San Andres zone. In order to allocate production from the Seven Rivers in the future after commingling with the San Andres the San Andres will be tracked and declined at a historical field rate until that time of shutting in the San Andres to complete the Seven Rivers. Upon completing and testing the Seven Rivers the two zones will be commingled and produced together. That known amount of San Andres production will be deducted from the total amount of commingled production to enable the determination of allocated Seven Rivers production.

Commingling Request has been approved by the New Mexico Energy, Minerals & Natural Resources Department's Administrative Order #DHC-1375 copies attached.

14. I hereby certify that the foregoing is true and correct
