

- B. The disturbed area will be revegetated by reseeding during the proper growing season with a seed mixture of native grasses as recommended by the B.L.M.
- C. The four-sided fence around the reserve pit will remain in place until the pit area is cleaned and leveled. No oil will be left on the surface of the fluid in the pit. The entire reserve pit will be fenced until the fluid has completely evaporated.
- D. Upon completion of the proposed operations, if the well is completed, the reserve pit will be treated as outlined within the same prescribed time. The caliche from any area of the original site not needed for production operations or facilities will be removed and used for construction of thicker pads or firewalls for the tank battery installation. Any additional caliche required for the facilities will be obtained from a B.L.M. approved caliche pit. Topsoil removed from the drill site will be used to recontour the pit area and any unused portions of the drill pad to the original natural level and reseeded as per B.L.M. instructions.
