Mr. W. F. Batson,
The Texas Company,
Wink, Texas.

Dear Mr. Batson:

In accordance with our telephone conversation of yesterday I am writing you regarding the pulling of the 12 inch pipe in your water well after you have set the 8-1/4" at about 970'.

You may do this providing you mud the 8-1/4" good and get a water shut off to protect the upper waters from drainage.

Trusting this covers what you wanted to know. I could barely hear you yesterday and it is possible that I haven't this straight, if this is the case please advise me and I will give you an answer.

Very truly yours,

J. D. Hunter,
State Oil & Gas Inspector.
