

March 27, 1951

Mr. D. D. Thomas  
809 San Angelo Nat'l Bank Bldg.  
San Angelo, Texas

Dear Sir:

In reply to your letter of March 22, 1951 regarding the plugging of your State well, # 1 in Sec. 12 - T 21- R 34 E.

On February 14, 1947, I approved form C-102, notice of intention to plug this well. In our files I find I have written you several letters in regard to the plugging of this well. I have also made several trips to the well before writing you in regard to cleaning up the location, filling up the pits and cellars and setting a regulation marker. I have received four different sets of C-103's, the results of plugging this well and in each one you state that the work was done differently.

I'm wondering if you hadn't better stop by this office sometime when you are up this way and give us a detailed report as to the final plugging of this well.

Very truly yours,

OIL CONSERVATION COMMISSION

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

• *Staphylococcus aureus* (Staph aureus) is a Gram positive cocci in clusters. It is a facultative anaerobe and is found in the skin, nose, and throat. It is a common cause of skin infections, such as abscesses and impetigo, and is also a common cause of food poisoning.

St. Petersburg, 1901
