

OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS REPORTS ON WELLS

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL		REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL

Date

OIL CONSERVATION COMMISSION,
SANTA FE, NEW MEXICO.

Gentlemen:

Following is a report on the work done and the results obtained under the heading noted above at the

Superior Oil Company, Carlsbad, New Mexico, Well No. 1 in the

Company or Operator

Lease

Block of Sec. 20, T. 21 N., R. 34 E., N. M. P. M.,

Blacat

Field,

County.

The dates of this work were as follows: 12-4-47 to 12-11-47

Notice of intention to do the work was (was not) submitted on Form C-102 on 12-4-47 19

and approval of the proposed plan was (was not) obtained. (Cross out incorrect words.)

DETAILED ACCOUNT OF WORK DONE AND RESULTS OBTAINED

Hole was filled from 4124' to 4130' with rock, and 2000' of lead wool was driven in on top of rock, which filled hole from 4130' to 4148'. Hole was then bailed dry and a 10 sack cement plug was placed above lead wool, which filled hole to 4090'. 2" upset tubing was run to 3830' and on 12-3-47 500 sacks of mud was pumped in dry hole by Holliburton. Mud filled to within 200' of the top of the hole. A 25 sack cement plug was then run through tubing at 3830' (which is at base of salt), which should fill up hole from 3830' to 3705'. Tubing was then pulled up to a depth of 2360', where a 25 sack cement plug was pumped in. This plug should extend from 2360' to (cont. on attached page)

2235', which is 60' up into the casing, cemented at 2285'.

On 12-9-47, tools were run to check top of plug and found top of plug at 2250', which is 25' up in casing. 7" casing was then cut off at 2250' and pulled out. A bridge was set at 300' and a 10 sack cement plug placed above bridge to protect surface water. Hole was then filled to surface with mud and a 4" joint of pipe cemented in top of hole as a marker. Grounds were cleaned, pits were filled and location left in about the same condition as found.
