### DETAILS OF PROPOSED PLAN OF WORK

This well has been proven to be a non-productive to a depth of 4404. There the well will be plugged back with cement to 3990 and the section from 3971 to 3990 will be acidized with 3000 gallons of acid in an attempt to induce production. The section from 3971 to 3990 was tested and proven to contain a small amount of oil and water. Therefore, it is hoped that acidizing will increase the permeability sufficiently to allow producable quantities of oil to enter the hole.
