FULL DETAILS OF PROPOSED PLAN OF WORK

FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS OF THE COMMISSION

Temperature survey has been made on this well, and we propose to kill the well with oil, pull tubing and re-run with a packer which we will attempt to set at approximately 3780-3790 in effort to shut off the gas coming from above this point. At the present time, this well is producing with a gas-oil ratio of 27800/1 and is being penalized 32 barrels daily in allowable due to this high ratio, which we hope to correct by setting this packer.
