

NEW MEXICO OIL CONSERVATION COMMISSION

Santa Fe, New Mexico

MISCELLANEOUS NOTICES

Submit this notice in triplicate to the Oil Conservation Commission or its proper agent before the work specified is to begin. A copy will be returned to the sender on which will be given the approval, with any modifications considered advisable, or the rejection by the Commission or its agent, of the plan submitted. The plan as approved should be followed, and work should not begin until approval is obtained. See additional instructions in the Rules and Regulations of the Commission.

• **Figure 10.10** illustrates the relationship between the number of units produced and the total cost of production. The total cost curve is a straight line that starts at the fixed cost of \$100,000 and increases linearly with the number of units produced. The variable cost per unit is \$10, and the total variable cost is \$10 times the number of units produced. The total cost curve is the sum of the fixed cost and the total variable cost.

It is important to note that the above results are based on the assumption that the data are stationary. If the data are non-stationary, the results may be biased. Therefore, it is important to test for stationarity before using the above results.
