(County or Subdivision)

New Mexico

(State or Territory)

The elevation of the derrick floor above sea level is 3575 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On 8-24-50 acidized the interval 3720 to 3835 with 1,000 gallons acid.

On 9-8-50 pumped 23.5 barrels oil and 23.5 barrels of water in 24 hours.

Production before acidization was 7 barrels oil and 0.7 barrels water in 24 hours.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Production from this well has declined to 7 barrels oil and 0.7 barrels water per day.

Permission is requested to acidize the interval 3720' to 3835' with 1,000 gallons acid in an attempt to increase the daily oil production from this well.

A subsequent report after acidization will be submitted.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
