THEORY OF THE EARTH AND ITS HISTORY

BY J. H. MACGILLIVRAI

The theory of the earth and its history is a branch of geology which deals with the origin and development of the earth and its various parts. It is a science which seeks to explain the processes which have shaped the earth and its features, and to determine the sequence of events which have taken place since the earth was first formed. The theory of the earth and its history is based on the study of the rocks and the fossils which they contain, and on the principles of geology which govern the formation and development of the earth.
