

Attachment - C-103

Gulf Oil Corporation - R. R. Bell "C" No. 4-F, 15-21-36

crude with 1# sand per gallon. Well kicked off.

6. Pulled parent packer, bridge plug and tubing. Reran 118 jts tubing and latched onto tubing seal receptacle at 3673'. Closed upper circulating valve at 3640'. Attempted to open lower circulating valve at ~~3790'~~ 3773'. Was unable to locate. Tubing had parted below production packer. Resultant milling and fish job covered 12 days.
7. Set Baker production packer on wire line at 3667'. Ran tubing set at 3823', circulating valves at 3790' and 3630'. Ran rods and pump.

Note: Work is completed on this well but due to difficulties incurred it took a large amount of oil to keep well killed. This load oil has not yet been recovered.
