[illegible]

Figure 1 consists of two side-by-side plots. Both plots show the number of nodes in the network (N) on the y-axis (ranging from 0 to 100) versus time (t) on the x-axis (ranging from 0 to 100). The left plot shows the evolution of the number of nodes in the network for different values of α (0.0, 0.1, 0.2, 0.3, 0.4, 0.5). The right plot shows the evolution of the number of nodes in the network for different values of α (0.0, 0.1, 0.2, 0.3, 0.4, 0.5). Both plots show a sharp increase in the number of nodes at $t=0$, followed by a plateau. The plateau height increases with α .

the 1990s, the number of people in the world who are under 15 years of age is expected to increase by 1.5 billion (United Nations, 1994). The United Nations (1994) also predicts that the number of people in the world who are 65 years of age and older will increase by 1.5 billion. The United Nations (1994) also predicts that the number of people in the world who are 65 years of age and older will increase by 1.5 billion.
