New Mexico Oil & Gas Conservation Commission
P.O. Box 2045
Hobbs, New Mexico

Attention Mr. Roy O. Yarbrough

Dear Sir:

We are enclosing duplicate copies of a radioactivity log run on the Tide Water #2 State "R", section 16-41g-344, Sanico Field, Lea County, New Mexico. Dual completion operations were commenced on the well on 9-17-52 by authority of the New Mexico Oil Conservation Commission after approval in Case 383, Order #R-180 at the July 18, 1952 hearing.

There is shown on the log a section of the Yates-Seven Rivers gas zone opened by perforations, acidized and tested. We propose to dual complete the upper zone for gas production from the above perforations with the oil productive zone 3827-3906' as outlined in the application.

Upon completion of the mechanical installation for dual completion, communication tests and any other tests deemed necessary by the Commission will be taken.

Immediately upon actual completion of the aforementioned well, a diagrammatic sketch of the mechanical installation used to complete and produce the separate zones along with a report of production, gas-oil ratio and reservoir pressure determinations for each zone will be submitted to the commission.

Yours very truly,

TIDE WATER ASSOCIATED OIL COMPANY
