

Hobbs, New Mexico.
Feb. 24, 1934.

Mr. J. D. Hunter,
State Oil and Gas Inspector,
Carlsbad, New Mexico.

Dear Sir:-

This will advise that the California Co. treated their Meredith State Well #1 with 2000 gals. of acid solution on account of the Well having been shot with 240 qts. of nitroglycerine prior to the acid treatment.

There was a possibility that by treating with 1000 gals. as requested the acid might not have raised in the hole to the producing horizons.

I might note that 55 gals. of Dowell blanket solution was used in the treatment of the well to assist the acid in contacting the producing formations.

Yours very truly,

The California Co.
