## Instructions

During gas-oil ratio test, each well shall be produced at a rate not exceeding the top unit allowable for the pool in which it is located to produce thirty percent. Operator is encouraged to take advantage of this 25 percent tolerance in order that maximum production be obtained.

Gas volume was reported in MCF measured at a pressure base of 15.025 psia and a temperature of 60° F. Specific gravity base will be 0.60.

Report casing pressure in lieu of tubing pressure for any well producing through casing.

(See Rule 301, Rule 1116 & appropriate pool rules.)

I hereby certify that the above information is true and correct to the best of my knowledge and belief.
