Re: Falton #1-P Sec. 28-21-36

Gentlemen:

Form C-116 filed at the close of the Gas Oil Ratio survey for the Eument pool reports a Gas Oil Ratio of 797,200 to 1 for your Falton #1-P in Section 28-21-36. Since this ratio exceeds 100,000 to 1, it automatically classifies the well as a Eument gas well. It will be necessary, therefore, for you to file a gas well plat with this office, showing the acreage which you propose to dedicate to this well and if that acreage is less than 640 acres, you will have to apply to the Director of the Commission for a non-standard proration unit. In the meantime, it is our intention to continue to assign an oil allowable to this well until March 1st, by which time you should have complied with the above instructions.

Yours very truly,

OIL CONSERVATION COMMISSION

General Information

This report is to advise you that the land unit in question is located at 9-15 section 10, 1 of 100, 100' to 1000' above sea level and a stream flows through the area. The stream is approximately 100' wide and about 1000' long. The stream bed is composed of gravel and sand. The water is clear and cold. The banks of the stream are rocky and eroded. The soil is thin and rocky. The vegetation consists of grasses, shrubs, and trees. The trees are mostly pines and oaks. The ground is covered with fallen leaves and pine needles. The area is sparsely populated and there are no buildings or roads. The climate is temperate and the average temperature is around 60 degrees Fahrenheit. The precipitation is moderate and the average annual rainfall is around 20 inches.

Yours very truly,

DLR CONSERVATION COMMISSION
