DUPLICATE

MISCELLANEOUS REPORTS ON WELLS

RECEIVED
OCT 20 1946
RECEIVED

HOBBAS OFFICE

Submit this report in triplicate to the Oil Conservation Commission or its proper agent within ten days after the work specified is completed. It should be signed and sworn to before a notary public for reports on beginning drilling operations, results of shooting well, results of test of casing shut-off, result of plugging of well, and other important operations, even though the work was witnessed by an agent of the Commission. Reports on minor operations need not be signed and sworn to before a notary public. See additional instructions in the Rules and Regulations of the Commission.

Indicate nature of report by checking below:

REPORT ON BEGINNING DRILLING OPERATIONS		REPORT ON REPAIRING WELL	
REPORT ON RESULT OF SHOOTING OR CHEMICAL TREATMENT OF WELL Back Plug	X	REPORT ON PULLING OR OTHERWISE ALTERING CASING	
REPORT ON RESULT OF TEST OF CASING SHUT-OFF		REPORT ON DEEPENING WELL	
REPORT ON RESULT OF PLUGGING OF WELL			

Midland, Texas, January 4, 1946

Title

THEORY OF THE EARTH

CHAPTER I

The Earth is a sphere, and its surface is covered by water. The land is divided into continents and islands. The continents are the large masses of land, and the islands are the small pieces of land. The water is divided into oceans and seas. The oceans are the large bodies of water, and the seas are the smaller bodies of water. The land is divided into countries and states. The countries are the large political divisions, and the states are the smaller political divisions. The water is divided into rivers and lakes. The rivers are the large bodies of water that flow into the oceans, and the lakes are the smaller bodies of water that are surrounded by land. The land is divided into mountains and valleys. The mountains are the high, rugged areas of land, and the valleys are the low, flat areas of land. The water is divided into icebergs and glaciers. The icebergs are the large pieces of ice that float in the oceans, and the glaciers are the large masses of ice that flow down the mountains.
