(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

November 12

1963

Lockhart 4-30
Well No. 2 is located 660 ft. from [N] line and 660 ft. from [E] line of sec. 30
NE/4 NE/4 Sec. 30 21-S 36-E NMPM
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
NMPM Lea New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3647 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

During routine inspection of this well, very high gas production was noted. Further investigation revealed excessive casing pressures due to gas production which were mechanically unsafe for the existing wellhead equipment. On October 29, 1963, the well was entered and 50 sacks of cement spotted across the producing interval from 3805-3957 and into 5-1/2" casing to 3167 (checked). An apparent hole or rupture was then located using RTTS tools at 3180'. This was squeezed with 150 sx to a pressure of 4000 psi. 18 sx were reversed from the pipe at 3050'. The well was then left shut in at the wellhead and will be temporarily abandoned. Work was completed on 10-31-63.

The USGS office was previously notified by telephone of this work.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
