(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)Dona Lee New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well with rotary tools at the above location to a total depth of approximately 3900'. All casing will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following casing pattern: 8 5/8" casing to be set at approximately 1,625' and cemented with approximately 1,375 sacks cement, cement to be circulated to surface; 5 1/2" casing to be set at approximately 3900' and cemented with approximately 1,200 sacks cement, exact amount to be determined by caliper survey. Casing to be perforated opposite the pay zone.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
