Subject: Application for Administrative approval to dually complete Shell Taylor-Glenn 2 in the Tubb Gas Pool and the Drinkard Oil Pool, Lea County, New Mex.

New Mexico Oil Conservation Commission
P. O. Box 871
Santa Fe, New Mexico

Gentlemen:

By this letter of application, Shell Oil Company wishes to state the following:

1. Shell Oil Company's Taylor-Glenn 2, located 4620 feet from the south line and 660 feet from the east line of Section 3-21S-37E, NMPM Survey, Lea County, New Mexico, was drilled to a total depth of 6710 feet and, on February 10, 1950, was completed as a Drinkard oil well in the open-hole (6665-6710 feet) below the 5 1/2-inch oil string.
2. Shell Oil Company holds leases on both the oil and gas rights under the subject well and the royalty interest for both oil and gas are held by common parties.
3. Shell Oil Company proposes to dually complete Taylor-Glenn 2 to produce Drinkard oil and Tubb gas in the manner outlined on Attachments 1 and 2. The Drinkard and Tubb sections will be separated by a production packer and the Tubb gas will be produced through the casing-tubing annulus. The Drinkard oil will be produced through 2 3/8-inch tubing and, when it becomes necessary to pump the Drinkard production, Drinkard gas will be vented from below the packer through a 1-inch tubing string.
4. The proposed manner of completion and production is both mechanically feasible and practical.
5. The granting of this application to produce Taylor-Glenn 2 as a dual completion is in the interest of conservation and the protection of correlative rights.

6. By copy of this application, all offset operators have been notified of Shell Oil Company's proposed dual completion.

In view of the facts set out above, it is respectfully requested that the New Mexico Oil Conservation Commission enter an order approving the proposed dual completion.

Very truly yours,

P. A. Dennie
Division Manager
