Township Elmestry Lee New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of pipe, and all other important proposed work.)

ILLEGIBLE

It is intended to drill a well with rotary tools at the above location to a total depth of approximately 5975'. All casing will be cemented in accordance with approved methods of the U. S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following casing pattern: 11-3/4" OD casing to be set at approximately 250' and cemented with approximately 250 sacks cement, cement to be circulated to surface; 7-5/8" OD casing to be set at approximately 2950' and cemented with approximately 1100 sacks cement; 5-1/2" OD casing to be set at approximately 5975' and cemented with approximately 900 sacks cement, exact amounts to be determined by caliper survey.

Approval to produce this well upon completion is also requested.
I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
