Gentlemen:

Subsequent to your letter dated 8-13-73, reclassifying subject well from an oil well to a gas well, the Drinkard and Blinbry Zones were isolated in accordance with Form C-103 submitted November 13, 1973. Since the Drinkard Zone is isolated below the packer set at 6440' with a tubing stop and the Blinbry is flowing through the tubing, the well is in effect a single completion. In view of this we ask that the packer leakage test requirement be waived.

Yours very truly,

J. E. YORK
Area Engineer
