Subject: Shut-in Status
Drinkard Zone
Southland Royalty Well No. 6

Mr. Joe D. Ramey
New Mexico Oil Conservation Commission
P. O. Box 1980
Hobbs, New Mexico

Dear Sir:

This has reference to your letter dated June 11, 1964, requesting a packer leakage test on the Southland Royalty "A" Well No. 6, a Blinebry Oil well located in Unit "H", Section 9, T-21-S, R-37-E.

This well was completed as a Drinkard Oil - Blinebry Gas well in December, 1953, with Drinkard Oil production through the tubing and Blinebry Gas production through the tubing-casing annulus. The Blinebry Zone was reclassified as an oil well in the Blinebry Oil Pool based on the producing characteristics shown on Form C-116 filed as the Official Gas-Distillate Test in November, 1962. Since Rule No. 107 states that flowing oil wells must be tubed, and the production from the Drinkard Zone had declined to the economic limit, the Drinkard was shut-in by setting a tubing stop in the seating nipple at 6482'. The Blinebry Oil production was diverted through the tubing by means of a Garrett circulating valve at 6476'. This work was approved by Form C-103 dated June 25, 1963.

Although the Drinkard and Blinebry are isolated by means of a Baker Model "D" Packer set at 6482' and the tubing stop in the seating nipple at the top of the packer, the well is actually a single Blinebry Oil completion producing through the tubing and open to the annulus. A packer leakage test would only record pressures in the Blinebry Zone. We, therefore, respectfully request that this well be exempt from leakage tests as long as the well is in its present status. A sketch showing the down-hole equipment in this well is attached.

Yours very truly,

V. E. Staley
Area Superintendent

BJS:slt
