DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In June, this well produced 1672 MCFG and 4 barrels of distillate. We now propose to pull tubing, run junk basket and perforate Tubb Formation from 6260-6320' w/2 JSFF. Run 2-1/2" tubing with sleeve valve at 6300' and latch into packer. Treat Tubb intervals with 10,000 gals. LSTNE acid down tubing, casing annulus using 450 gals. "Jalx 830" as blocking material. Test Tubb interval through tubing and close sleeve valve and produce through annulus. Retrieve tubing plug, run rods and pump and place Drinkard Zone on production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
