Hobbs, New Mexico

Attention: Mr. R. F. Montgomery

Gentlemen:

While taking a packer leakage test on our Hawk B-10 No. 1 in B-10-21-37, a Tubb-Drinkard dual completion, an indication of communication was discovered. By setting a tubing plug and exerting pressure on the tubing it was found that the leak is in the tubing. The Tubb zone has been quite weak and in order to evaluate the desirability of running an additional tubing string to unload liquid accumulation we have blanked off the Drinkard zone with a tubing plug and opened the Tubb to the tubing by opening a Garrett sleeve valve. The Drinkard, therefore, is temporarily shut-in and the Tubb zone alone is producing.

Yours very truly,

A handwritten signature in dark ink, appearing to read "J. R. Parker".
