EXHIBIT "A" HAWK B-10 #3 DRILLING PROGRAM

Apache Corporation plans on re-entering this well, drilling out plugs with a workover rig down to the cement plug @ 7420', which will become the PBTD of the well, and perforating the Abo formation at an estimated depth of 6842' to 6854'. See Exhibit A-1 for diagrams of the P&A'd Wellbore and the proposed Re-Entry.

I. The geological surface formation is recent Permian with quaternary alluvium and other surficial deposits.

II. Estimated Tops of Geological Markers:

<u>FORMATION</u>	<u>DEPTH</u>
Grayburg	3800'
Glorieta	5200'
Blinebry	5650'
Tubb	6140'
Drinkard	6465'
McKee	7475'
Connell	7715'
Ellenburger	7815'
Granite Wash	7970'
TD	7981'

III. Estimated depths at which water, oil, gas, or other mineral-bearing formations are expected to be encountered:

SUBSTANCE
Oil
Grayburg at 3800'
Abo at 6760'
Gas
None anticipated
Fresh Water
None anticipated

All fresh water and prospectively valuable minerals (as described by BLM) encountered during drilling will be recorded by depth and adequately protected. All oil and gas shows within zones of correlative rights will be tested to determine commercial potential.

IV. A. Proposed Casing Program: No new casing will be installed. Existing casing as follows:

HOLE	CASING		WEIGHT		<u>SACKS</u>	
SIZE	SIZE	GRADE	PER FOOT	DEPTH	CEMENT	EST. TOC
12 1/4"	10 3/4"	H-40	33#	268'	250 sx	Circulated
9 7/8"	7 5/8"	H-40	24#	3099'	1150 sx	TOC @ 1350' (TS)
6 3/4"	5 1/2"	J -55	14/15.5/17#	7981'	750 sx	TOC @ 3140' (TS)

- B. Proposed Cement Program: No new cement program will be necessary.
- V. Proposed Mud Program: No new mud program will be necessary.
- VI. Proposed Control Equipment:

Will install on the 10 3/4" surface casing an 11" x 3000 PSI Shafter. Double hydraulic BOP and will test before drilling out of surface casing. See Exhibit "H" for BOP layout.

- VII. Auxiliary Equipment:
 - 11" x 3000 psi double BOP/blind & pipe ram; 11" x 3000 psi Kelly Lock; 11" x 3000 psi mud cross H₂S detector or production hole; TIW type safety valve 4" choke line from BOP to manifold; 2" adjustable chokes 1.4 blowdown line.

As only a 2000psi BOP is needed on this well, a remote control for the accumulator will not be needed.

- VIII A. Testing Program: Drill Stem Tests: None planned
 - B. Logging Program: None planned
 - C. Coring Program: None planned
- IX. No abnormal pressures or temperatures are anticipated. In the event abnormal pressures are encountered, however, the proposed mud program will be modified to increase the mud-weight. The estimated maximum bottom hole pressure is 1980 psi.

This plan is submitted to provide permitting agencies with information necessary to allow an appraisal of the environmental effects associated with the proposed drilling operations. Within the context of typical drilling operations, this plan provides for protection of surface resources and other environmental components. This plan has been developed in conformity with the United States Geological Survey NTL-6 guidelines, Bureau of Land Management Oil and Gas Order No. 1, and in connection and consultation with the private surface owner of record, if other than the United States of America, as well as the Roswell District Office for the Bureau of Land Management and the United States Department of the Interior personnel.

PART #1:

1) Surface Location:

SW¼NE¼ of Section 10, Township 21 South, Range 37 East, N.M.P.M. Lea County, New Mexico 1980' FNL, 1980' FEL, Unit G See attached Exhibits "D" and "E"

2) Bottom Hole Location:

SW¹/₄NE¹/₄ of Section 10, Township 21 South, Range 37 East, N.M.P.M. Lea County, New Mexico 1980' FNL, 1980' FEL, Unit G See attached Exhibits "D" and "E"

NM-2512

3) Leases Issued:

4) Record Lessee:

Apache Corporation 50%
Atlantic Richfield Company 25%
Chevron USA Inc. 25%

5) Acres in Lease:

Section 3: Lots 1, 2, 3, 4, 7, 8, 12, 15, 16, N¹/₂SE¹/₄, SE¹/₄SE¹/₄

Section 4: Lot 1

Section 10: W½NE¼, SE¼NE¼, E½NW¼

Total Acres: 708.67

6) Acres Dedicated to Well:

There are 40.00 acres dedicated to this well, which takes in SW1/4NE1/4 of Section 10, Township 21 South, Range 37 East, N.M.P.M., Lea County, New Mexico.

PART #2:

1) Existing Roads:

Exhibit "E" comprises 2 maps showing the well site in relation to existing roads and State Highway 18. The well is ± 3.5 miles north of Eunice, New Mexico.

- 2) Planned Access:
 - A. Length and Width: Existing lease/access roads will be used into the well site.
 - B. Construction: Existing roads will need no upgrading
 - C. Turnouts: None required.
 - D. Culverts: None required.
 - E. Cuts and Fills: As needed.
 - F. Gates and Cattleguards: None required.
- 3) Location of Existing Wells:

Exhibit "F" shows existing wells within a 1-mile radius of the proposed re-entry.

- 4) Location of Existing and/or Proposed Facilities:
 - A. Existing production facilities are located in Unit C of Section 10, T21S-R37E.
 - B. If the oil well proves to be commercial, any necessary production facilities will be installed on the drilling pad, and flow lines will be installed along the proposed route to the production facilities and storage tanks, as shown on Exhibit "E-3".
- 5) Location and Type of Water Supply:

Apache Corporation plans to use produced water for this re-entry.

- 6) Source of Construction Materials: None required.
- 7) Method of Handling Waste Material:
 - A. Drill cuttings will be disposed of in the reserve pits.
 - B. Drilling fluids will be allowed to evaporate in the reserve pits until the pits are dry.
 - C. All pits will be fenced with normal fencing materials to prevent livestock from entering the area.
 - D. Water produced during operations will be collected in tanks until hauled to an approved disposal system.
 - E. Oil produced during operation will be stored in tanks until sold.
 - F. Apache Corporation will comply with current laws and regulations pertaining to the disposal of human waste.
 - G. All waste materials will be contained to prevent scattering by the wind and will be removed from the well site within 30 days after drilling and/or completion operations are finished.

- 8) Ancillary Facilities: None planned.
- 9) Well Site Layout:
 - A. Exhibit "G" shows the relative location and dimensions of the well pad, reserve pits, and major rig components. The pad and pit area have been staked and flagged.
 - B. Mat Size: 200' x 200' including reserve pits as shown on Exhibit "G".
 - C. Cut & Fill: None anticipated.
 - D. Reserve pits will be lined with 6 mil plastic.
- 10) Plans for Restoration of the Surface:
 - A. After completion of drilling and/or completion operations, all equipment and other material, not needed for operations, will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the well site in as aesthetically pleasing a condition as possible.
 - B. Any unguarded pits containing fluids will be fenced until they are filled.
 - C. If the proposed well is non-productive, Apache Corporation will comply with all rehabilitation and/or vegetation requirements of the Bureau of Land Management, and such rehabilitation will be accomplished as expeditiously as possible. All pits will be filled and leveled within 90 days after abandonment.

11) Other Information:

- A. <u>Topography:</u> The wellsite and access road are located in the Querecho Plains and are relatively flat.
- B. <u>Soil:</u> The proposed location, access road and production facilities consist of sandy soil. Slope in the proposed area ranges from zero (0) to five (5) degrees.
- C. Flora and Fauna: Vegetation is one of a grassland environment and a scrub-grass, scrub disclimax community. The wildlife consists of rabbits, coyotes, rattlesnakes, lizards, dove, quail and other wildlife typical of the semi-arid desert land.
- D. <u>Ponds and Streams</u>: There are no ponds, lakes, streams or feeder creeks in the immediate area.
- E. <u>Residences and Other Structures:</u> There are no occupied residences or other structures on or near the proposed location.
- F. Land Use: The land is used for grazing cattle.
- G. Surface Ownership: The surface is owned by McNeill Ranches, P. O. Box 1058, Hobbs, NM 88241. A Surface Damage Release agreement was executed by McNeill Ranches and Apache Corporation on June 25, 2001.
- H. Archaeological, Historical, and Other Cultural Sites:

As no new surface will be disturbed in this re-entry operation, Rosemarie Havel with the Carlsbad Resource Area office of the Bureau of Land Management has indicated no new archaeological survey is needed on the well pad. Don Clifton, Archaeological Consultant, is preparing an archaeological survey on the flow-line route, which will be filed under separate cover.

I. Operator's Representative:

Senior Representative: Lee R. White 2000 Post Oak Blvd., Suite 100 Houston, Texas 77056 713-296-6291

Project (Operations Engineer): Bruce West 2000 Post Oak Blvd., Suite 100 Houston, Texas 77056 713-296-7127 Drilling Operations: Mike Warren P. O. Box 848 Wink, Texas 79789 505-394-2743

CERTIFICATION

I increby certify that Apache Corporation has inspected the proposed drillsite and access route; that they are familiar with the conditions which presently exist; that the statements made in the plan are, to the best of my knarowledge, true and correct; and, that the work associated with the operations proposed herein will be performed by Apache Corporation and its contractors and subcontractors in conformity with this plan and the terms and counditions under which it is approved. This statement is subject to the provisions of 18 U.S.C. 1001 for the filing of a false statement.
