DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

In 1958 this well was reclassified as a low pressure gas well in an oil pool. During 1960 it had a daily average of low pressure gas of 95.4 MCF.

We propose to set a GIBP at 7600', perf the lower Abo from 7260-70', 7290-7310', 7325-50', 7405-20', 7430-60' w/2 JSPP, acidize these perfs w/15,000 gals NE acid containing a buffering additive using 3 straddle packers to stage the treatment, test these intervals. If non-commercial, set a BP w/cement at 7200', perf upper Abo from 6885-98', 6955-90', 7020-65', 7124-62' w/2 JSPP, treat these intervals w/15,000 gals 15% NE acid containing a buffering additive and using 3 straddle packers.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
