Hawk B-3

October 9, 1963

Well No. 6 is located 310 ft. from ~~XNN~~ [S] line and 660 ft. from [E] line of sec. 3
SE/4 or Lot 24 Sec 3
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
NMPM
(Field) (County or Subdivision) (State or Territory)
New Mexico

The elevation of the derrick floor above sea level is 3464 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well is presently in a temporary shut-in status.

We now propose to set a CISP at 4200' on wire line and perforate the San Andres at 3958-68', 3982-80', 4000-06', 4009-12', 4035-42', 4048-54' & 4062-69' w/2 JS&F; treat perfs 3958-4069' w/5000 gals 15% LSTNE acid in 4 stages with 20 ball sealers between stages; swab load and test.

A subsequent report will be filed upon completion of this work.
The setting of bridge plugs does not constitute permanent abandonment of the lower perforations. Should conditions warrant, at the time of permanent abandonment, the bridge plugs must be drilled out and cement placed across all perforations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
