## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is our intention to drill a well at the above location to a TD of approximately 1,000' with rotary tools in an attempt to obtain commercial production in the Silurian. All casing joints will be cemented in accordance with approved methods of the USGS and any other special requirements will be complied with.

It is planned to use the following casing pattern: 10' of 13-3/8" casing to be cemented with approximately 500 sacks; cement to be circulated; 9-5/8" casing to be set at approximately 500' and cemented with 1150 sacks cement or sufficient cement to plug it the well bottom as determined by survey; 7" casing to be set at 10 and cemented with 700 sacks cement or as determined by survey and to be perforated opposite the pay zone.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
