(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to drill a well with rotary tools at the above location to a total depth of approximately 6000'. All casing will be cemented in accordance with approved methods of the U.S. Geological Survey and any other special requirements will be complied with.

It is planned to use the following casing pattern: 10-3/4" OP casing to be set at approximately 120' and cemented with approximately 250 sacks cement, cement to be circulated to surface; 7-5/8" OP casing to be set at approximately 2775' and cemented with approximately 1250 sacks cement; 5-1/2" OP casing to be set at approximately 6000' and cemented with approximately 650 sacks cement, exact amounts to be determined by caliper survey.

Approval to produce this well upon completion is also requested.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
