

NEW MEXICO OIL CONSERVATION COMMISSION  
Santa Fe, New Mexico

## REQUEST FOR (OIL) - (GAS) ALLOWABLE

RECEIVED  
New Well  
Recompletion

This form shall be submitted by the operator before an initial allowable will be assigned to any completed oil well. Form C-104 is to be submitted in QUADRUPPLICATE to the same District Office to which Form C-101 was sent. The allowable will be assigned effective 7:00 A.M. on date of completion or recompletion, provided this form is filed during the 15th month of completion or recompletion. The completion date shall be that date in the case of an oil well when oil is delivered into the stock tanks. Gas must be reported on 15.025 psia at 60° Fahrenheit.

Hobbs, New Mexico

# Introduction

The purpose of this document is to provide a comprehensive overview of the project's objectives, scope, and timeline. The project aims to develop a new software application that will streamline the workflow of our department. The scope of the project includes the design, development, testing, and deployment of the application. The timeline for the project is estimated to be 12 weeks, starting from the beginning of the month and ending by the end of the month.

The project is divided into several phases, each with its own set of tasks and deliverables. The first phase is the initial planning and analysis, which will involve gathering requirements and defining the project's goals. The second phase is the design and development, which will involve creating the application's architecture and coding the core functionality. The third phase is the testing and deployment, which will involve conducting unit tests, integration tests, and user acceptance tests, followed by the final deployment of the application.

The project team consists of several members, each with specific responsibilities. The project manager will oversee the overall progress and ensure that the project is completed on time and within budget. The software developer will be responsible for the design and development of the application. The tester will be responsible for conducting the various tests to ensure the application's quality. The user representative will provide feedback and ensure that the application meets the needs of the end-users.

The project's success will be measured by several key performance indicators (KPIs). These include the completion of the project on time, within budget, and to the satisfaction of the end-users. The project will also be evaluated based on the quality of the application, the effectiveness of the communication, and the overall impact on the department's workflow.

In conclusion, this project is a critical initiative for our department, and we are committed to its successful completion. We will maintain regular communication and provide updates on the project's progress. We welcome any feedback or suggestions from the project team and the end-users.
