FULL DETAILS OF PROPOSED PLAN OF WORK
(FOLLOW INSTRUCTIONS IN THE RULES AND REGULATIONS)

NMOCC Order No. MC-1449 authorized recompletion of the subject well as a Elinebry Oil over Tubb Gas dual producer utilizing a cross-over arrangement to permit Tubb production via the casing-tubing annulus above a packer landed above the Elinebry Oil zone. It now is proposed to effect a conventional dual completion in the aforementioned pools utilizing parallel strings of 2-1/16-inch OD integral joint tubing. The Drinkard zone will be abandoned as originally proposed. A Baker model D retainer production packer will be set near 6030 feet to separate the Elinebry and Tubb zones.

The essentials of the modified completion plan are presented on the attached schematic diagram.
