Subject: Application for Administrative
Order for Dual Completion
J. R. Cone Eubanks Well No. 2

New Mexico Oil Conservation Commission
P. O. Box 871
Santa Fe, New Mexico

Gentlemen:

Application is made herewith for an Administrative Order to permit completion of J. R. Cone Eubanks No. 2 as a Blinebry Oil over Tubb Gas dual. As shown on the attached plat, Eubanks No. 2 is located in the center of Unit L, Section 14, T-21-S, R-37-E, Lea County, New Mexico.

This well has produced as a Tubb Gas over Drinkard Oil dual since July, 1952 under the provisions of NMOCC Order No. R-138. It is proposed to abandon the Drinkard zone and dual the existing Tubb Gas with Blinebry Oil.

The attached schematic diagram presents the mechanical arrangement planned to achieve the proposed cross-over dual completion. The Drinkard zone will be abandoned by plugging the present dual completion retainer production packer and capping same with cement. A new fixed retainer production packer will be set between Blinebry and Tubb zones. Cross-over flow will be achieved at a retrievable snap-set packer equipped with hydraulic hold-down set above the upper or Blinebry Oil zone. This latter packer will contain a fixed inner flow tube and by-pass tee which assembly will divert the Blinebry Oil flow up the tubing and the Tubb Gas flow into the tubing-casing annulus.

We believe the proposed method of completion will best serve the interests of economy and conservation.

All offset operators, as listed on the attached Application For Dual Completion, have been supplied complete copies of this application by certified mail. Please advise if any additional information is desired.

Yours very truly,

J. R. Cone
